

Valar xGov Participation Terms

Terms governing optional participation in the Algorand xGov program through the Valar Peer-to-Peer Staking Platform.

Valar Solutions GmbH

18 August, 2026

1 General Information

- These terms (the “**xGov Participation Terms**”) govern the optional feature that enables users of the Valar Peer-to-Peer Staking Platform to join the Algorand xGov program with voting delegation arranged through Valar (the “**Feature**”).
- The Feature is offered by Valar Solutions GmbH, registered in the Swiss Confederation (the “**Operator**”). Concerns or inquiries can be directed to contact@valar.solutions.
- The Feature is optional and is not required to create or maintain a staking contract on the Valar Platform. By selecting the Feature and confirming the relevant transactions, you (the “**User**”) accept these xGov Participation Terms.

2 Applicable Terms and Third-Party Program

1. These xGov Participation Terms supplement the Valar Platform Terms of Use accepted by the User for use of the Valar Platform. The Valar Platform Terms of Use continue to apply, including their provisions on self-custody, blockchain and smart-contract risks, third-party resources, disclaimers, liability, governing law, and dispute resolution. If there is a conflict, these xGov Participation Terms prevail only with respect to the Feature.
2. The xGov program is a separate program operated by Algorand Foundation Ltd. and is governed by its own [xGov terms and conditions](#) and applicable smart contracts (the “**xGov Program Terms**”). The Operator does not control the xGov program and cannot guarantee that its rules, fees, eligibility criteria, voting procedures, or smart contracts will remain unchanged.
3. Technical information about Valar’s delegation mechanism is available in the [delegation documentation](#) and [FAQ](#). These materials are explanatory and do not override these xGov Participation Terms or the xGov Program Terms.

3 xGov Participation and Delegated Voting

1. By joining xGov through the Feature, the User instructs the Operator to facilitate the User’s enrollment in the xGov program and to establish voting delegation to the Operator or to an Algorand address designated by the Operator, using the applicable xGov and delegation smart contracts.
2. This authorization is limited to xGov governance voting and to a limited number of votes cast. It does not authorize the Operator to transfer, withdraw, custody, or otherwise control the User’s staked ALGO or other digital assets.
3. The User remains free to vote directly where permitted by the xGov program. The Operator will not intentionally override a valid direct vote cast by the User. Delegated voting is intended primarily as a fallback where the User has not cast a valid vote.
4. If the User has not cast a valid vote, the Operator will use its reasonable efforts, subject to technical and operational availability, to cast a delegated vote before the applicable

deadline. The Operator does not guarantee that any vote will be submitted, confirmed, accepted, or counted.

5. The Operator determines the content of any delegated vote at its own discretion. The Operator is not required to solicit or follow the User's views, voting preferences, or instructions, and no particular voting outcome or economic benefit is promised.

4 Fees, Deposits and Sponsorship

1. Before the User confirms the Feature, the Valar User Interface displays the amounts associated with xGov enrollment and delegation and the User's resulting net payable amount. These amounts may include xGov program fees, delegation or representation processing costs, Algorand transaction or minimum-balance amounts, and other protocol-required deposits or funding.
2. Amounts charged or retained by the xGov program or the Algorand protocol are governed by the applicable xGov Program Terms and smart contracts. The nature and release or refunding of any deposit or minimum-balance amount depend on those rules.
3. The Operator may sponsor some or all amounts for selected Users. Where sponsorship is shown before confirmation, the Operator bears the sponsored amount for that transaction. Sponsorship is discretionary, may differ between Users or transactions, and creates no entitlement to future sponsorship.

5 Revocation and Service Availability

1. The User may revoke or change the delegation, or leave the xGov program, using the mechanisms made available by the applicable xGov or delegation smart contracts. A revocation or change becomes effective only once the relevant smart contract transaction has been confirmed and does not reverse votes already cast.
2. The Operator may suspend, modify, or discontinue the Feature where reasonably required for technical, security, legal, or operational reasons. The Operator will use reasonable efforts to make material service changes known through the Valar User Interface or its other channels.
3. Users who prefer to participate in xGov without delegation to Valar may do so independently through the [xGov Portal](#), subject to the xGov Program Terms.

6 Risks and Liability

The xGov program, Algorand network, wallets, and relevant smart contracts are external or decentralized systems that may fail, change, be paused, or behave unexpectedly. The Operator does not guarantee successful enrollment or delegation, xGov eligibility, voting power, continued xGov status, avoidance of xGov penalties, or any financial or other benefit from participation. The risk allocation, disclaimers, and limitations of liability in the Valar Platform Terms of Use apply to the Feature to the maximum extent permitted by applicable law.

7 Amendments

The Operator may amend these xGov Participation Terms to reflect changes to the Feature, the xGov program, applicable law, or operational requirements. Material changes affecting the scope of delegated voting authority or amounts payable by the User will be communicated through the Valar User Interface and, where required, will require renewed acceptance before they apply to the User's continued use of the Feature.
